More patients benefit from condition-specific standardized care as part of the QBP Program

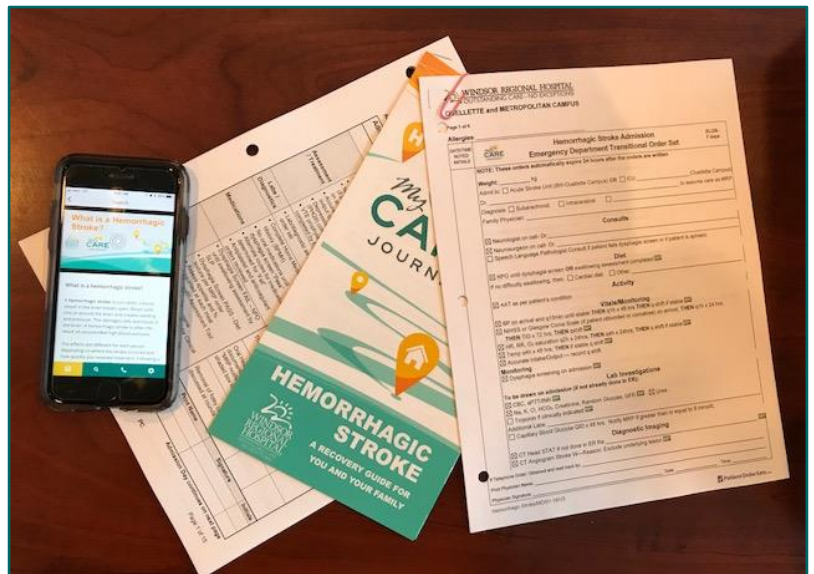

On February 5th, the next round of Quality Based Procedure (QBP) Bundles will be launching for patients with selected conditions. These Bundles include physician Order Sets, standardized care plans called Clinical Pathways, day by day guides called Patient Experience Pathways, and valuable information for patients and family members about what to expect in the hospital on the WRH My Care Journey mobile app.

New or revised bundles will be available for the following conditions/procedures:

- Stroke – Ischemic (CVA) and TIA
- Stroke – Hemorrhagic
- Total Hip Replacement/Arthroplasty
- Total Knee Replacement/Arthroplasty

Don't forget that patients with COPD, Pneumonia, Heart Failure, Ischemic Stroke and Hip Fracture should be on the new QBP Pathways and have all elements of the bundles in use.

Ask your Operations or Clinical Practice Managers for more information, or visit WRHow.ca for details.

The QBP Pathway Improvement Program provides best practice standardized care and involves patients and their family members in their care.

WRH My Care Journey mobile app: Valuable information for patients and family

The hospital can be an unfamiliar place, and finding out you have a new diagnosis or are having a surgery can leave many patients feeling uneasy and unprepared for their journey. The WRH My Care Journey app helps patients and their family members know what to expect in the hospital, play an active role in their treatment, and understand next steps in their care.

As a hospital employee, be the first to download the app for yourself and promote it with your patients and family members before our upcoming external launch!

Have a great weekend!
